Mitsubishi Electric Unveils New Ducted AHU and Universal Outdoor Unit

2018-03-29

Mitsubishi Electric US introduces the new 1:1 ducted air handler SVZ designed to be paired with an SUZ Universal outdoor unit.

The air handler joins the M-Series product lineup from Mitsubishi Electric, which includes an array of indoor unit, outdoor unit, and control options. Like the series' ductless systems, the SVZ is energy efficient, easy to install, and flexible in its application. What sets the SVZ apart from other models is its smaller foot-print and one-to-one configuration with the SUZ Universal outdoor unit.

"We are excited to round out our already comprehensive M-series lineup with this addition," said Brinnon Williams, director of residential product development. "The reduced physical sizes provide more installation flexibility. The smaller capacities are ideal for performance construction applications where you still might like to have access to de-signing around ductwork. Although smaller and now more affordable, the SVZ and SUZ still retain the effectiveness of Mitsubishi Electric products."

The SVZ achieved Seasonal Energy Efficiency Ratio (SEER) of 16-18. The 12,000 and 18,000 BTU/ h models are available with electric heat kits as accessories. With reduced height, the SVZ enable upflow and horizontal configurations.
