

Less is More

After 5 years of R&D, the shower of the future is finally here. Nebia created a shower system that makes less water feel like so much more. By atomizing water, millions of droplets are released in precise patterns to envelop your body like a cocoon. 10x more water comes into contact with your skin while using 70% less water. The experience is unlike any other, blending the best of a steam room and a traditional shower. Effortlessly, the Nebia Shower System slides 25 inches up and down to customize the spray pattern to your height and includes a Wand for a simultaneous side spray. Nebia can be installed in under 20 minutes without plumbers or broken tiles. The product is designed and built in the USA. www.nebia.com

Zoned Heating & Cooling

Mitsubishi Electric US, Inc.'s Cooling & Heating Division (Mitsubishi Electric), a leading manufacturer of Zoned Comfort Solutions™ and Variable Refrigerant Flow (VRF) cooling and heating systems, introduces its MLZ Series One-Way Ceiling Cassette. An expansion of the M-Series line from Mitsubishi Electric, the product features a sleek, narrow-body ceiling cassette design. Designed to fit between standard 16" joists, the MLZ can be easily

installed in existing homes and new construction projects. The ceiling cassette design provides an additional option to the product offering from Mitsubishi Electric. It is effective regardless of ceiling height because of its adjustable airflow. Plus, its auto vane control is capable of adjusting air direction based on the homeowner's comfort needs. Additionally, the MLZ One-Way Ceiling Cassette can be serviced from directly beneath the unit itself,

without requiring an access panel. This further eliminates the need for contractors or remodelers to modify the surrounding area to install or service the product. It also includes a built-in condensate lift mechanism with a 19" lift. With less need to manipulate joists, homeowners can enjoy significant cost savings on installation. www.mitsubishicomfort.com
